

THE ELSE STATEMENT

The Boolean
Data Type

Boolean
Operators

Conditional
Control Flow

The **else statement** runs lines of indented code when the none of the logical conditions in an if or elif statements are met

EXAMPLE *Determining experience level for a snowboard*

```
price = 499.99
price_threshold = 500

if price > price_threshold:
    print('This snowboard is for experienced users.')
else:
    print('This board is suitable for a beginner.')
```

This board is suitable for a beginner.

How does this code work?
