

THE ELIF STATEMENT

The Boolean
Data Type

Boolean
Operators

Conditional
Control Flow

Any number of **elif statements** can be used between the if and else statements
As more logical statements are added, it's important to be careful with their order

Will the elifs below ever run?

```
price = 1499.99
luxury_threshold = 1000
expert_threshold = 500
intermediate_threshold = 300

if price > intermediate_threshold:
    print('This board is good for intermediate users')
elif price > expert_threshold:
    print('This board is for experienced users')
elif price > luxury_threshold:
    print("The gold doesn't improve the ride but it looks great!")
else:
    print('This should be suitable for a beginner.')
```

This board is good for intermediate users

***No**, because any value that is true for them will also be true for the if statement above them*

Either put the most restrictive conditions first, or be more explicit with your logic
