F-Strings

EXAMPLE

Grabbing components of a text string

```
message = 'I hope it snows tonight!'  
message[0:6:1]
```

'I hope'

How does this code work?

- **Start: 0** – start with the first element in the string
- **Stop: 6** – stop at the seventh element (index of 6) in the string without including it
- **Step size: 1** – return every single element in the range
